

dear FCC personnel,

please reject the NAB petition o4-160 so that my family and I can continue to hear the major metropoliton areas weather and traffic info stations on XM RADIO. the information is much, much better than we can get from the local radio brodcasts and, in addition, we can also hear weather and traffic for cities that we are travelling to or through. we also get an added bonus of receiving CNN and Headline News which no other radio station provides! and the music! we can listen to any style of music all day long in any part of the country without commercials! i'll bet that the petition is being circulated because we won't be listening to any commercials...

if the FCC does not reject this petition, myself and millions of fellow satelite radio listeners will be protesting on your doorstep soon. this is not a threat, but we will not turn our radios off without a fight.

by the way, have you people ever heard of the righjt of free speech?

sincerely, will anderson
